BBC

Background

Concerns with Access

“You’re suffering from a terrible
postcode.”

Aims

- to see if the introduction of Online Testing has not compromised access for those asymptomatic patients that are most in need.
- Done by analyzing:

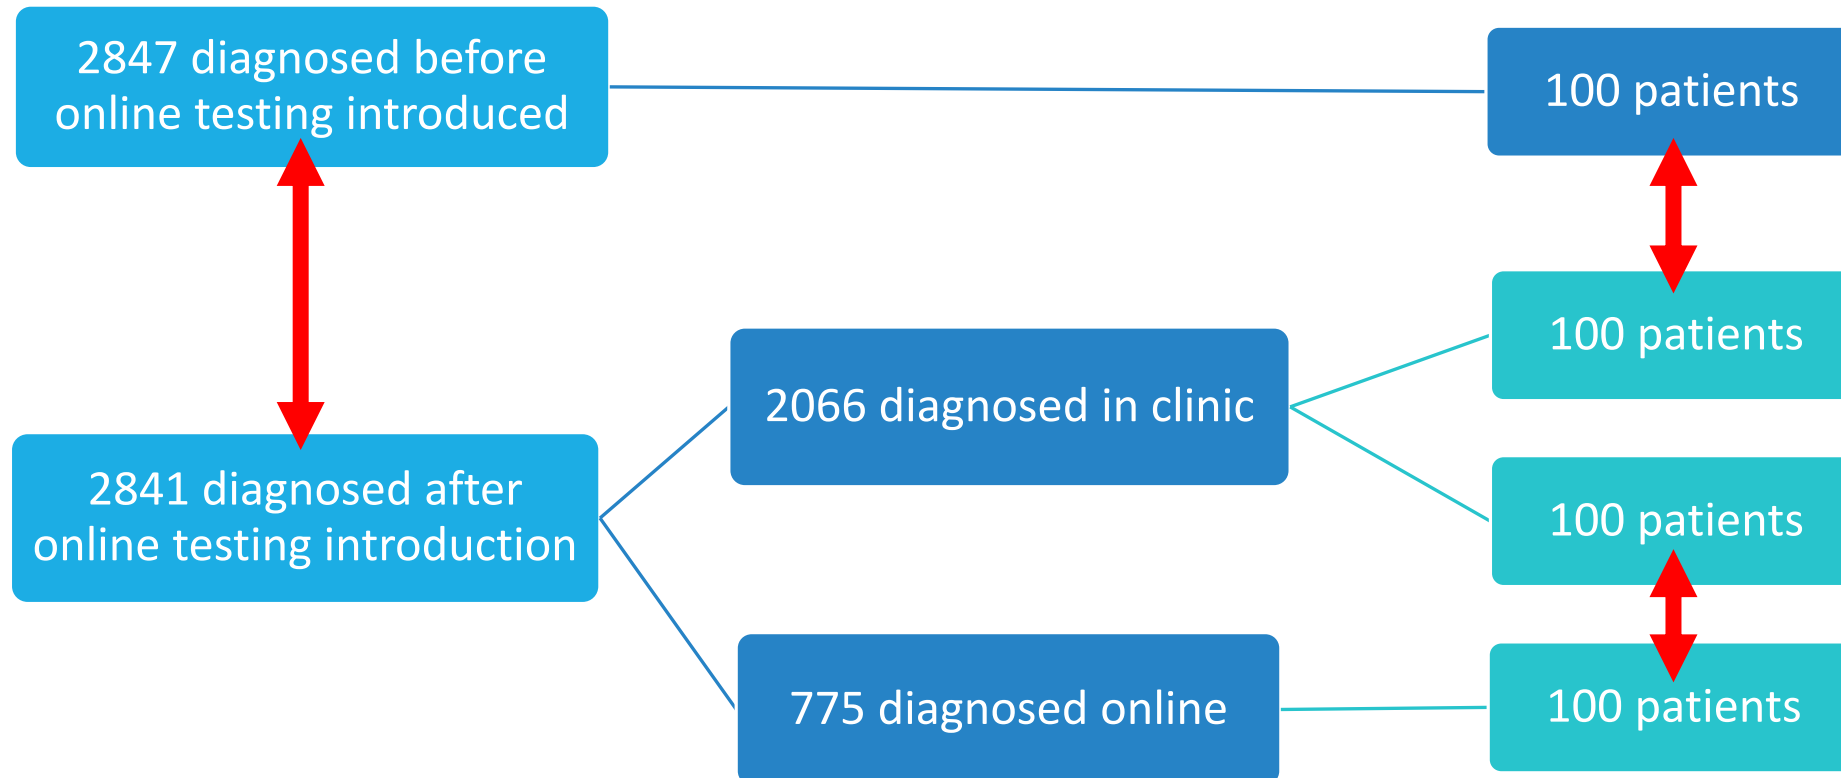

Demographics

and

Case Management

Sample

What did we look at?

The following factors were of particular interest in the results:

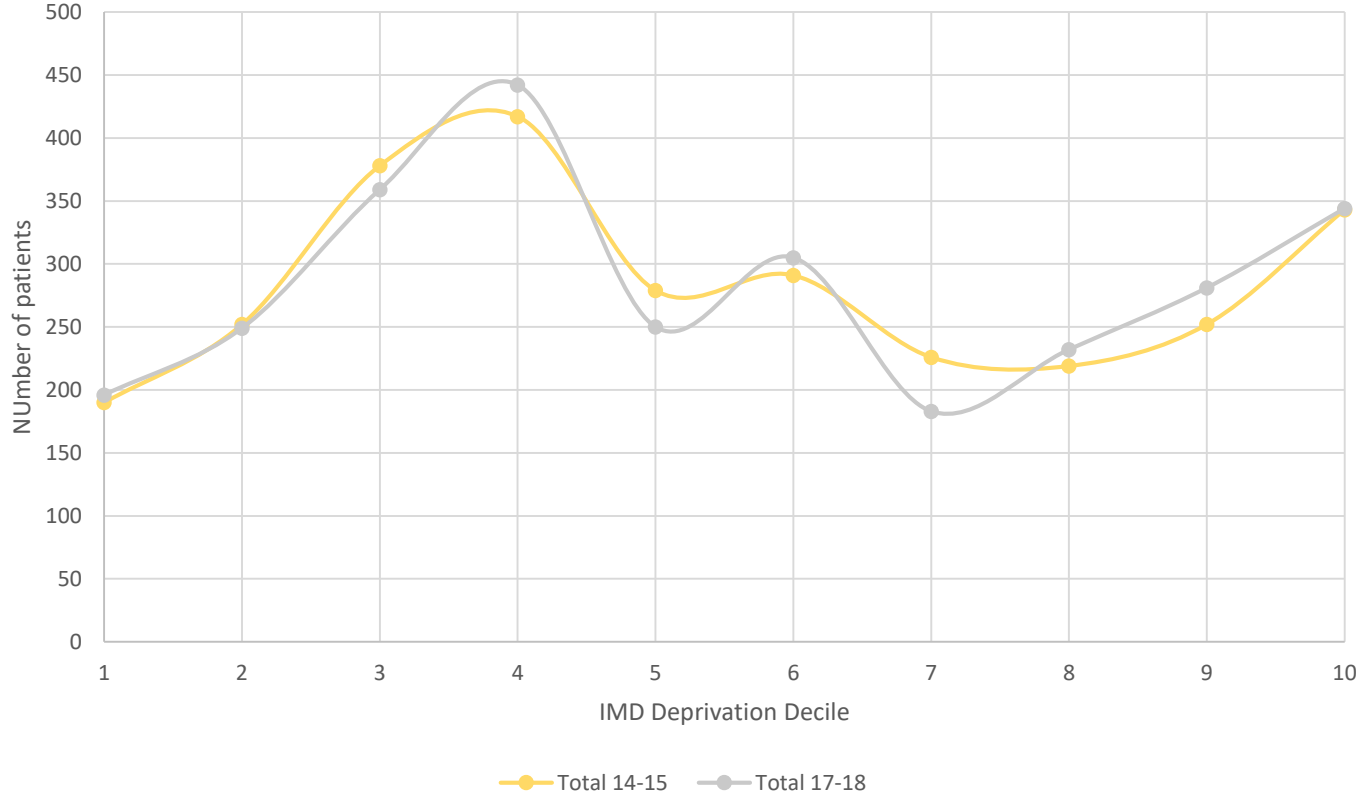

1. Demographics

1. Deprivation
2. Age
3. Gender
4. Sexual Orientation
5. Ethnicity

2. Case Management

1. Duration between time of test and treatment
2. Was Retreatment required?

Deprivation in patients before and after online testing

Trend in patient deprivation index has **NOT** changed

Age of patients diagnosed after online testing

Trend in patient age is **NOT** different

Gender of patients diagnosed after online testing introduction

Clinic

■ Male ■ Female

Larger proportion of patients using online are **FEMALE**

Online

■ Male ■ Female

Sexual Orientation of patients diagnosed after online testing introduction

Clinic

■ Hetero ■ Non-hetero

Larger proportion of patients using online are **NON-HETEROSEXUAL**

Online

■ Hetero ■ Non-hetero

Ethnicity of patients diagnosed after online testing introduction

Larger proportion of patients using clinic are **BAME**

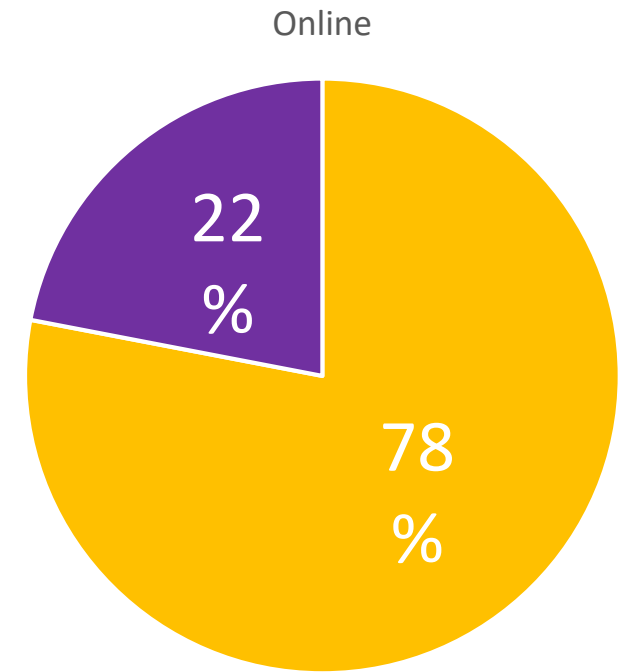

Duration between time of test and treatment of patients diagnosed after online testing introduction

■ Within 1 week ■ Longer than 1 week

Larger proportion of patients using online receive treatment in **LESS THAN 1 WEEK**

■ Within 1 week ■ Longer than 1 week

Was Retreatment required in patients diagnosed after online testing introduction?

Larger proportion of patients using online are **DID NOT** need retreatment

What does this mean?

- Gender
- Sexual Orientation
- **Ethnicity**
- Duration between time of test and treatment
- Was Retreatment required?

- Deprivation
- Age

Conclusion

- Online Testing has **NOT** produced a barrier to access
- Online Testing is being used by HRGs
- Patients using online testing receive treatment faster and are less likely to need retreatment
